1. DATA SET IDENTIFICATION

1.1 Title of Catalog Document

NSS-I Data Set PILOTS4 1985

1.2 Authors of the Catalog Entry

U.S. EPA NHEERL Western Ecology Division
Corvallis, OR

1.3 Catalog Revision Date

May 1998

1.4 Data Set Name

PILOTDS4

1.5 Task Group

Aquatic Effect Research Program (AERP)- National Surface Water Survey

1.6 Data Set Identification Code

160

1.7 Version

001

1.8 Requested Acknowledgment

This research was funded as apart of the National Acid Precipitation Assessment Program (NAPAP) by the U.S. Environmental Protection Agency (EPA). If you publish these data or use them for analyses in publications, EPA requires a standard statement for work it has supported:

"Although the data described in this article have been funded wholly or in part by the U.S. Environmental Protection Agency, it has not been subjected to Agency review, and therefore does not necessarily reflect the views of the Agency and no official endorsement of the conclusions should be inferred."

2. INVESTIGATOR INFORMATION

2.1 Principal Investigator

Dixon Landers

U.S. Environmental Protection Agency
NHEERL Western Ecology Division
200 S.W. 35th Street
Corvallis, OR 97333

2.2 Investigation Participant - Sample Collection

John Baker, Coordinator

3. DATA SET ABSTRACT

3.1 Abstract of the Data Set

The primary function of the stream water chemistry samples characterizes or indexes the chemical and physical properties of a sample reach. The Pilot survey data were collected during field activities during the spring and early summer of 1985. The Pilot survey was conducted to test the logistical and analytical protocols planned for the full-scale NSS-I in the Mid-Atlantic and Southeast. Data from the Pilot Survey were used to evaluate the statistical sampling design, logistics plan, quality assurance plan, data management program, and data analysis plan.

3.2 Keywords for the Data Set

Aluminum, alkalinity, acid neutralizing capacity, calcium, carbonate, color, specific conductance, dissolved inorganic carbon, dissolved organic carbon, bicarbonate, potassium, magnesium, ammonium, sodium, nitrate, total nitrogen, pH, total phosphorus, silica, total suspended solids, turbidity, absorbance, chlorophyll a, water chemistry

4. OBJECTIVES AND INTRODUCTION

4.1 Program Objective

The objectives of the pilot survey were (1) to test the ability of NSS-I sampling design to meet Phase I objective, based on analysis of data collected during the pilot survey, (2) to evaluate the Phase I logistics plan (including safety aspects and uncertainties concerning legal and physical site access) and alternative methods of collection, handling, and chemical analysis of samples, and (3) to develop and test a data analysis plan for Phase I, using actual data collected in the pilot survey.

4.2 Data Set Objective

Data set Pilotds4 was used to evaluate the statistical sampling design, logistics plan, quality assurance plan, data management program, and data analysis plan.

4.3 Data Set Background Discussion

4.4 Summary of Data Set Parameters

Water chemistry parameters are reported for one sample taken at the midpoint of the selection stream reach. These include: aluminum, alkalinity, acid neutralizing capacity, calcium, carbonate, color, specific conductance, dissolved inorganic carbon, dissolved organic carbon, bicarbonate, potassium, magnesium, ammonium, sodium, nitrate, total nitrogen, pH, total phosphorus, silica, total suspended solids, and turbidity.

5. DATA ACQUISITION AND PROCESSING METHODS

5.1 Data Acquisition

5.1.1 Sampling Objective

Five field sampling visits were made from mid-March to mid-June. During each, a single grab sample of stream water for the purposes of chemical analysis was obtained.

5.1.2 Sample Collection Methods Summary

A 3.8 L sample and four 60-mL syringe samples were collected.

A sample was taken from mid-depth of the stream using a battery driven peristaltic pump and pumped into a 4-liter Cubitanier and four gas-tight 60 ml syringe samples.

5.1.3 Sampling Start Date
March 1985

5.1.4 Sampling End Date
June 1985

5.1.5 Platform
NA

5.1.6 Sampling Gear
Routine samples were collected from each stream by pumping water through 1/4 inch Tygon tubing held in the center of the stream at mid-depth with a 6-foot sampling boom. Water samples were pumped into a 4-liter polyethylene Cubitainer using portable, battery-driven peristaltic pumps. In addition, four gas-tight 60ml polypropylene syringe samples were collected without exposing the samples to the atmosphere in order to minimize changes in the water sample prior to analysis. These syringes were used for analysis of pH, dissolved inorganic carbon (DIC), and total monomeric and nonexchangeable aluminum performed in the laboratory. (Knapp et al., 1987, Hagley et al., 1988)

5.1.7 Manufacturer of Instruments
NA

5.1.8 Key Variables
NA

5.1.9 Sampling Method Calibration
NA

5.1.10 Sample Collection Quality Control
Messer, J.J., E.W. Ariss, J.R. Baker, S.K. Drouse, K.N. Eshleman, P.R. Kaufmann, R.A. Linthurst, J.M. Omernik, W.S. Overton, M.J. Sale, R.D. Schonbrod, S.M. Stambaugh, and J.R. Tuschall, Jr. 1986. 13. PERSONNEL INFORMATION

Project Manager
John Stoddard
U.S. Environmental Protection Agency
NHEERL Western Ecology Division
200 S.W. 35th Street
Corvallis, OR 97333
541-754-4441
541-754-4716 (FAX)
stoddard.john@epa.gov

Quality Assurance Officer
Dave Peck
U.S. Environmental Protection Agency
NHEERL Western Ecology Division
200 S.W. 35th Street
Corvallis, OR 97333
541-754-4426
541-754-4716 (FAX)
peck.david@epa.gov

Information Management, EMAP-Surface Waters
Marlys Cappaert
0A0 c/o U.S. Environmental Protection Agency
NHEERL Western Ecology Division
200 S.W. 35th Street
Corvallis, OR 97333
541-754-4467
541-754-4716(FAX)
cappaert@mail.cor.epa.gov
